

Macclesfield Parliamentary Constituency

This is the first bulletin of 2016 produced by Northern Housing Consortium (NHC) providing analysis of housing-related data for the Parliamentary Constituencies in the North of England. The report provides analysis of the impacts of welfare reform and the housing market in the constituency.

We have used the following symbols to indicate your performance against the relevant regional or national statistics.

Economic Activity

Neighbourhood Statistics shows that there are 68,502 residents in Macclesfield aged between 16 and 74. Of these, 71.7% are economically active (this includes unemployed and actively looking for work) which compares to 70.5% in Cheshire and 67.8% for the region as a whole.

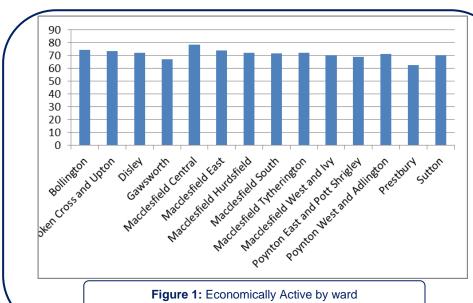

The latest economically active figures are an increase on those from the 2001 Census. In 2001, there were 70.8% of residents aged 16 to 74 classed as economically active. This coincides with an increase in the number of people aged 16 to 74.

Figure 1 below shows economically active are concentrated in Macclesfield Central (78.1%) and Bollington (74.1% wards having highest proportions of economically active 16 to 74 year olds.

Benefits and affordability

Nomis data showed that in June, there were 650 Universal Credit and Job Seekers Allowance claimants in the constituency, a fall from 690 at the same point in 2015. This represents 1.1 % of people aged over 16 in the constituency with 50-54 year olds making up 20% of claimants.

Using these indicators, it would appear that the Government's aim of a lower welfare country is being achieved. Furthermore, annual survey of hours and earnings data shows that hourly pay for full-time workers grew between 2014 to 2015 from £14.41 to £14.64 – delivering on the higher wage 'settlement'.

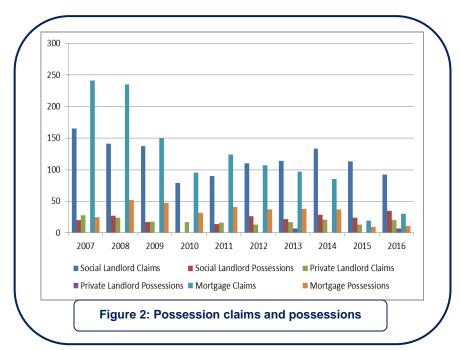

Coinciding with the rise in full-time hourly earnings, Ministry of Justice figures show that total housing possession claims (-2.1%) fell in the first quarter of 2016 compared to the same period of 2015 in the local authority area but that actual possessions grew (60%).

As Figure 2 shows social landlord claims were the only possession actions which fell in number over this period (-18.6%).

Greatest increases were seen in mortgage claims (57.9%) and private landlord claims (53.8%). There were also increases in social landlord possessions (45.8%) and mortgage possessions (22.2%).
