Stock Condition and Health

The NHC commissioned report 'The Hidden Cost of Poor Quality Housing in the North', written by the Smith Institute, highlights the scale of the problem and the increased health impacts of those living in homes that are not fit for purpose. The report is available from our [website](#).

After the success of the Decent Homes Standard in social housing, the report highlights the importance of improving homes in the private sector. Housing Strategy Statistical Appendix data for 2016/17 states that there were 9 private rented properties found to have one or more Category 1 hazards in Barrow-in-Furness. In that financial year 2 private rented properties were improved due to direct action of the local authority.

The Smith Institute report that just over a third of all non-decent homes in the North have someone aged 60 or over and that 82% of all non-decent homes with someone aged 60 or over are owner-occupied. Some 25,101 or 29% of the population of the constituency are aged over 60 (2017).

2016 based population projections for Barrow-in-Furness show that between 2018 and 2041 the population of over 60s will increase by 21.1% to 33,700 compared to the total population decrease of 9.9%.

Households

Out of an estimated 41,603 households in the constituency, Department of Business, Energy & Industrial Strategy figures show that 6,060 are said to be in fuel poverty (14.6%). This compares to 13.8% in the region. Figure 2 shows percentage of households in fuel poverty by Lower Super Output Area.

One of the HHSRS Category 1 hazards relates to thermal comfort. Office of National Statistics calculated an Excess Winter Mortality (EWM) index in the constituency of 0%. Whereas both the regional and national figures stood at 14.9% and 14.7% respectively.

According to BRE the overall cost to society of non-decent homes is as high as £20 billion. However, due to the Decent Homes Programme, the issue is greatest in the private sector and in particular the homes of older owner-occupiers.

In the local authority area 89.1% of older households live in owner-occupied homes, while a further 6.6% live in private rented accommodation (a total of 95.7% of the older population).
