Stock Condition and Health

The NHC commissioned report 'The Hidden Cost of Poor Quality Housing in the North', written by the Smith Institute, highlights the scale of the problem and the increased health impacts of those living in homes that are not fit for purpose. The report is available from our [website](#).

After the success of the Decent Homes Standard in social housing, the report highlights the importance of improving homes in the private sector. HSSA data for 2016/17 states that there were 228 private rented properties found to have one or more Category 1 hazards in Bolton. In that financial year 219 private rented properties were improved due to direct action of the local authority.

The Smith Institute report that just over a third of all non-decent homes in the North have someone aged 60 or over and that 82% of all non-decent home with someone aged 60 or over are owner-occupied. Some 20,537 or 19.4% of the population of the constituency are aged over 60 (2017).

2016 based population projections for Bolton show that between 2018 and 2041 the population of over 60s will increase by 29.0% to 82,800 compared to the total population increase of 5.5%.

Households

Out of an estimated 42,845 households in the constituency, Department of Business, Energy & Industrial Strategy figures show that 6,138 are said to be in fuel poverty (14.3%). This compares to 12.8% in the region. Figure 2 shows percentage of households in fuel poverty by LSOA.

One of the HHSRS Category 1 hazards relates to thermal comfort. Office of National Statistics cannot calculate an Excess Winter Mortality (EWM) index in the constituency of as the number of deaths are lower than the expected figure. The regional and national figures are 14.9% and 14.7% respectively.

According to BRE the overall cost to society of non-decent homes is as high as £20 billion. However, due to the Decent Homes Programme, the issue is greatest in the private sector and in particular the homes of older owner-occupiers.

In the local authority 83.5% of older households live in owner-occupied homes, while a further 6.7% live in private rented accommodation (a total of 90.2% of the older population).
