

## Carlisle Parliamentary Constituency

This is the first bulletin of 2019 produced by Northern Housing Consortium (NHC) providing analysis of housing-related data for the Parliamentary Constituencies in the North of England. The report provides analysis of the housing condition and demography in the constituency.

We have used the following symbols to indicate your performance against the relevant regional or national statistics.

Below average

### Household size and dwelling stock

[Office of National Statistics](#) (ONS) reports that in 2017 there were 19.0 million families in the UK, a 15% increase from 16.6 million in 1996 and that with 12.9 million families, the married or civil partner couple family remains the most common in 2017, with the cohabiting couple family growing the fastest.

Household size at the national level in 2016 stood at 2.4 and this is projected to fall to 2.3 by 2041. Similarly, household size in Carlisle is set on a downward trend, being 2.14 people in 2016 and projected to be 2.10 by 2041.

Meanwhile, as Figure 1 shows, Census data shows that by far most households live in properties with three bedrooms or less. It shows that smaller dwellings (2 bedrooms or less) are more prevalent than in the region as a whole.

At the regional level there are 45,641 households subject to the Spare Room Reduction (10.2%). However, these data appear to show a better balance between household size and the size/type of dwellings available in the district than other parts of the sub-region.

## Vacant dwellings

The private rented sector is becoming an increasingly important provider of housing. The Valuation Office Agency data shows 2,200 rents recorded between October 2017 and September 2018 in Carlisle. This is up from 2,070 on the 2015/16 financial year.

Median private rents have remained static over the intervening period at £450 per calendar month in 2015/16 and in the period ending in September 2018 in Carlisle. Over the same period, the Bank of England base rate grew by 0.25% from 0.5% to 0.75%.

This, nevertheless, does not appear to affect demand with vacant dwellings increasing in the district. Since 2014, there has been an overall increase of 265 vacant properties and there were a total 1,851 vacant dwellings at October 2018. Some 789 were long-term vacant in 2018 – an upward trend.

Although MHCLG figures do not provide data on private vacant dwellings, by subtracting the social vacant figures from the total, we can calculate that there are 1,733 private vacant homes in the district in October (both owner-occupied and private rented).
