

## Rossendale and Darwen Parliamentary Constituency

This is the first bulletin of 2019 produced by Northern Housing Consortium (NHC) providing analysis of housing-related data for the Parliamentary Constituencies in the North of England. The report provides analysis of the housing condition and demography in the constituency.

We have used the following symbols to indicate your performance against the relevant regional or national statistics.

### Household size and dwelling stock

[Office of National Statistics](#) (ONS) reports that in 2017 there were 19.0 million families in the UK, a 15% increase from 16.6 million in 1996 and that with 12.9 million families, the married or civil partner couple family remains the most common in 2017, with the cohabiting couple family growing the fastest.

Household size at the national level in 2016 stood at 2.4 and this is projected to fall to 2.3 by 2041. Similarly, household size in Rossendale is set on a downward trend, being 2.3 people in 2016 and projected to be 2.2 by 2041.

Meanwhile, as Figure 1 shows, Census data shows that by far most households live in properties with three bedrooms or less. It also shows that smaller dwellings (2 bedrooms or less) are more prevalent than in the region as a whole.

At the regional level there are 45,715 households subject to the Spare Room Reduction (10.2%). However, these data appear to show a better balance between household size and the size/type of dwellings available in the district than other parts of the sub-region.

## Vacant dwellings

The private rented sector is becoming an increasingly important provider of housing but Valuation Office Agency data shows 410 rents recorded between October 2017 and September 2018 in Rossendale. This is down from 480 on the 2015/16 financial year.

Median private rents have increased over the intervening period from £450 per calendar month in 2015/16 to £475 in the period ending in September 2018 in Rossendale. This is an increase of 5.6%. Over the same period, the Bank of England base rate grew by 0.25% from 0.5% to 0.75%.

This does not appear to have affected demand with vacant dwellings decreasing in the district. Since 2014, there has been an overall decrease of 234 vacant properties and there were a total 1,207 vacant dwellings at October 2018. Some 474 were long-term vacant in 2018 – a downward trend.

Although MHCLG figures do not provide data on private vacant dwellings, by subtracting the social vacant figures from the total, we can calculate that there are 1,173 private vacant homes in the district in October (both owner-occupied and private rented).
