

## Workington Parliamentary Constituency

This is the first bulletin of 2019 produced by Northern Housing Consortium (NHC) providing analysis of housing-related data for the Parliamentary Constituencies in the North of England. The report provides analysis of the housing condition and demography in the constituency.

We have used the following symbols to indicate your performance against the relevant regional or national statistics.

### Household size and dwelling stock

[Office of National Statistics](#) (ONS) reports that in 2017 there were 19.0 million families in the UK, a 15% increase from 16.6 million in 1996 and that with 12.9 million families, the married or civil partner couple family remains the most common in 2017, with the cohabiting couple family growing the fastest.

Household size at the national level in 2016 stood at 2.4 and this is projected to fall to 2.3 by 2041. Similarly, household size in Allerdale is set on a downward trend, being 2.2 people in 2016 and projected to be 2.1 by 2041.

Meanwhile, as Figure 1 shows, Census data shows that by far most households live in properties with three bedrooms or less – with three bedrooms accounting for almost half. It shows however, that smaller dwellings (2 bedrooms or less) are less prevalent than in the region as a whole but still account for one-third of stock.

At the regional level there are 45,715 households subject to the Spare Room Reduction (10.2%) and these data suggest a disparity between household size and the size/type of dwellings available in the district.

## Vacant dwellings

The private rented sector is becoming an increasingly important provider of housing, but Valuation Office Agency data shows 1,150 rents recorded between October 2017 and September 2018 in Allerdale. This is down from 1,230 on the 2015/16 financial year.

Median private rents have increased over the intervening period from £450 per calendar month in 2015/16 to £475 in the period ending in September 2018 in Allerdale. This is an increase of 56%. Over the same period, the Bank of England base rate grew by 0.25% from 0.5% to 0.75%.

This, nevertheless, does not appear to affect demand with vacant dwellings decreasing in the district. Since 2014, there has been an overall decrease of 5 vacant properties and there were a total 1,837 vacant dwellings at October 2018. Some 820 were long-term vacant in 2018 – an upward trend.

Although MHCLG figures do not provide data on private vacant dwellings, by subtracting the social vacant figures from the total, we can calculate that there are 1,730 private vacant homes in the district in October (both owner-occupied and private rented).
